Updated:
07/2024

The reasons to choose low dose 3D mammography include:

- Doctors can find smaller masses sooner – especially if you have dense breast tissue.
- Heightened detail can detect cancer earlier.
- Less radiation dose.
- Reduced additional testing needed.

What is Low Dose 3D Mammography?

Iowa Radiology is proud to offer the next generation in 3D mammogram technology, Genius™ low dose 3D with Smart Curve Mammography.

Genius™ low dose 3D mammography is clinically proven to detect 20-65% more breast cancers compared to 2D alone.¹ It also reduces call backs by up to 40%.^{1,2} It is the only exam which is FDA approved as superior for women with dense breasts.^{1,3}

The new Smart Curve compression device is more comfortable as it mirrors the shape of a woman's breast and applies uniform compression over the entire breast for added comfort. It is indicated for most women.

What to Expect

During your mammogram, your breast will be compressed while the x-ray arm makes a quick arc taking a series of images at a number of angles.

In some cases you may be asked to come back for additional imaging such as a diagnostic mammogram or ultrasound.

What You Need to Know

- Do NOT use deodorant or perfume before your appointment
- Plan for a 30 minute visit
- If your last mammogram was not performed at Iowa Radiology, please let your scheduler know.
